Profile

MSc Artificial Intelligence student at Dublin Business School, graduating September 2026, with over a year at Deloitte supporting HIPAA-compliant healthcare IT systems in production. Comfortable questioning whether a system is measuring the right thing before trusting its output, and quick to pick up new agentic tooling (LangGraph, Groq tool-calling) to actually ship it. Open to graduate roles across AI, data, software engineering, and IT in Ireland.

Experience

Deloitte

Nov 2023 – Dec 2024

Associate Analyst

Hyderabad, India

- Triaged tickets inside a specialised Epic EMR functional team, resolving directly or escalating to infrastructure and other Epic teams when deeper access was needed.
- Worked directly with a technology team that had no Epic system access, clarifying which issues they could resolve internally versus needing escalation through Epic or infrastructure.
- Ran patch management, application testing, and Active Directory provisioning in a clinical environment with zero tolerance for system downtime.

Education

Dublin Business School

Sep 2025 – Expected Sep 2026

MSc, Artificial Intelligence

Dublin, Ireland

Sri Krishna Adithya College of Arts & Science

2020 – 2023

B.Sc., Computer Technology, First Class Honours, GPA: 7.42/10

Coimbatore, India

P.A. Polytechnic College

2016 – 2019

Diploma, Computer Engineering, 69%

Pollachi, India

Projects

Atlantic Ledger | *Python, XGBoost, SHAP, DiCE, Groq*

Demo · GitHub

- Trained an XGBoost churn classifier on 10,000 synthetic Irish banking profiles (ROC-AUC 0.959, average precision 0.842), explained with SHAP and stress-tested with DiCE counterfactuals.
- Wrapped the model in a governed retention agent with four deterministic tools and a fail-closed policy gate, shipped as two live surfaces (Next.js case study, Streamlit lab) backed by 72 passing tests.

The Settlement Gap | *SQL, PostgreSQL, DuckDB, Streamlit*

Demo · GitHub

- Modelled payment-to-settlement reconciliation as one SQL chain across 80,000 synthetic transactions, verified to return identical results on DuckDB and PostgreSQL in CI on every push.
- Built a four-view Streamlit workbench for triaging exceptions, layering an isolation-forest anomaly score with SHAP attribution on top of the same SQL-defined rules.

KAIROS | *Python, Scikit-learn, PyTorch*

Demo · GitHub

- Found that the original SLA-breach model was scoring finished tickets rather than open ones, and rebuilt it around prefix-based features, leakage screening, and an out-of-time split.
- Added calibration, Mondrian conformal prediction, and a cost-sensitive alarm policy; held-out AUC rises from 0.619 with one event observed to 0.887 by the eighth.

Skills

- **AI & ML:** PyTorch · Scikit-learn · XGBoost · SHAP · FAISS · LangGraph · RAG · NLP
- **Data, Dev & Enterprise:** SQL (PostgreSQL, DuckDB) · Pandas · Flask · Streamlit · Git · CI/CD · ServiceNow · Active Directory · HIPAA Governance

Certifications

- JPMorgan Chase & Co. Software Engineering Job Simulation – Forage
- IBM Data Science Professional Certificate (V3) – Coursera
- AWS Cloud Practitioner Essentials – AWS Training & Certification
- Claude Code in Action – Anthropic
- Claude with Google Cloud's Vertex AI – Anthropic
- HackerRank SQL (Intermediate) – HackerRank
- HackerRank Problem Solving (Intermediate) – HackerRank
